

1. Download xampp from: <https://www.apachefriends.org/download.html>
2. Install xampp and keep options the way shown in the Screenshots

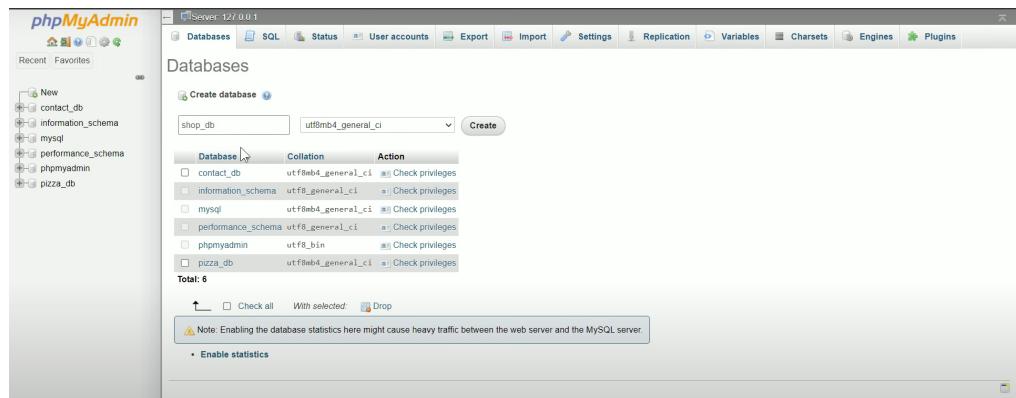

3. Open the xampp control panel and start the apache and MySQL from control panel

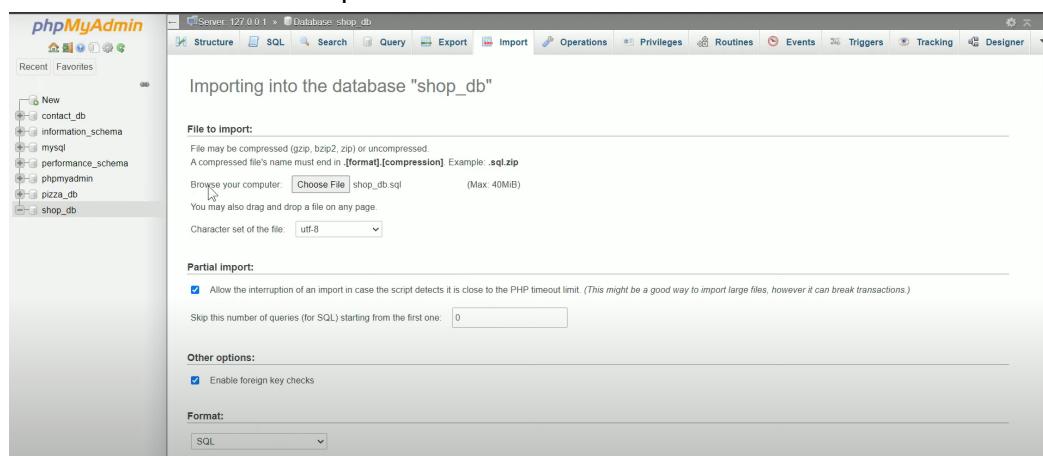

4. Then open the localhost/phpmyadmin/ on your browser click on new database and then name it 'shop_db' which is same as shop_db.sql provided in the github repo.

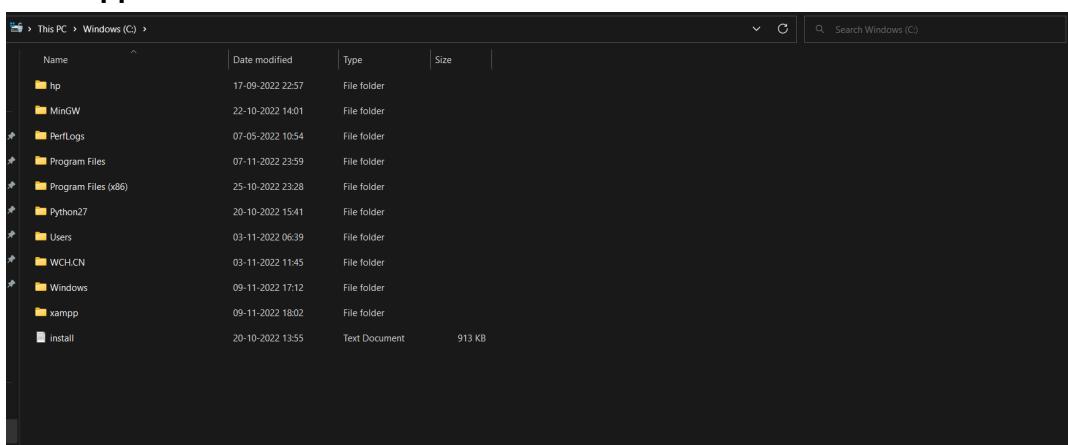

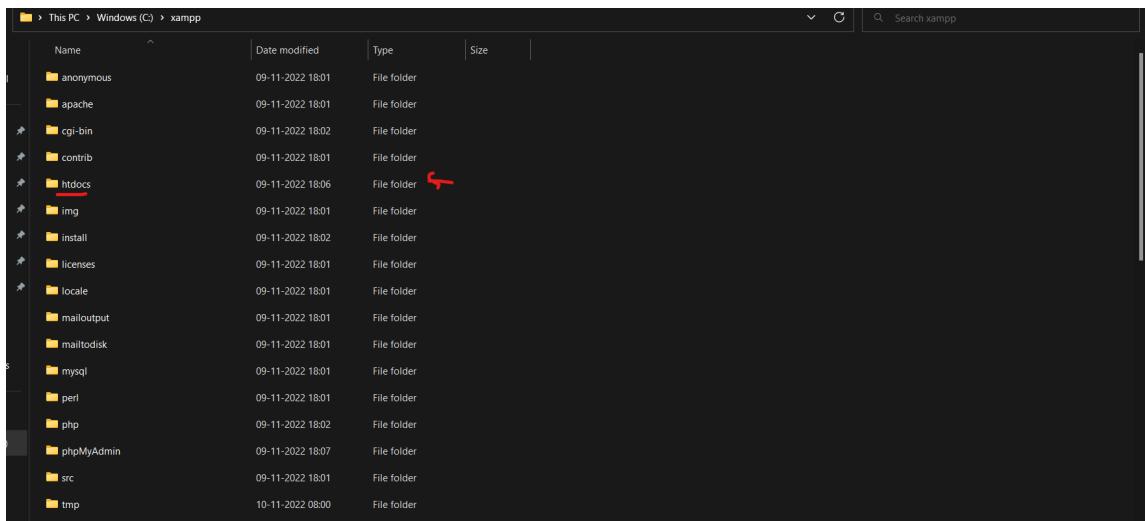

5. After creating the database import the shop_db.sql file provided using the ‘choose file option’ and then click on “Import” button or “Go button”

6. Now download the website the folder from the GitHub repo and paste it into the C:\xampp\htdocs

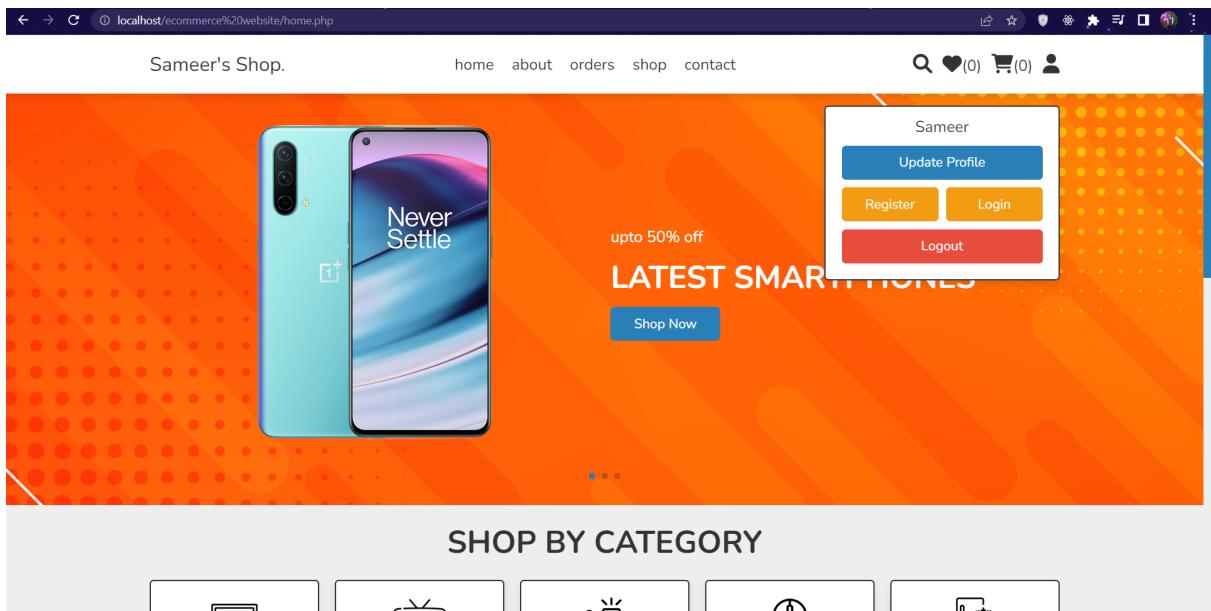

7. Go to the browser and type <http://localhost/ecommerce-website-main> and it will take you to the home page of the website.

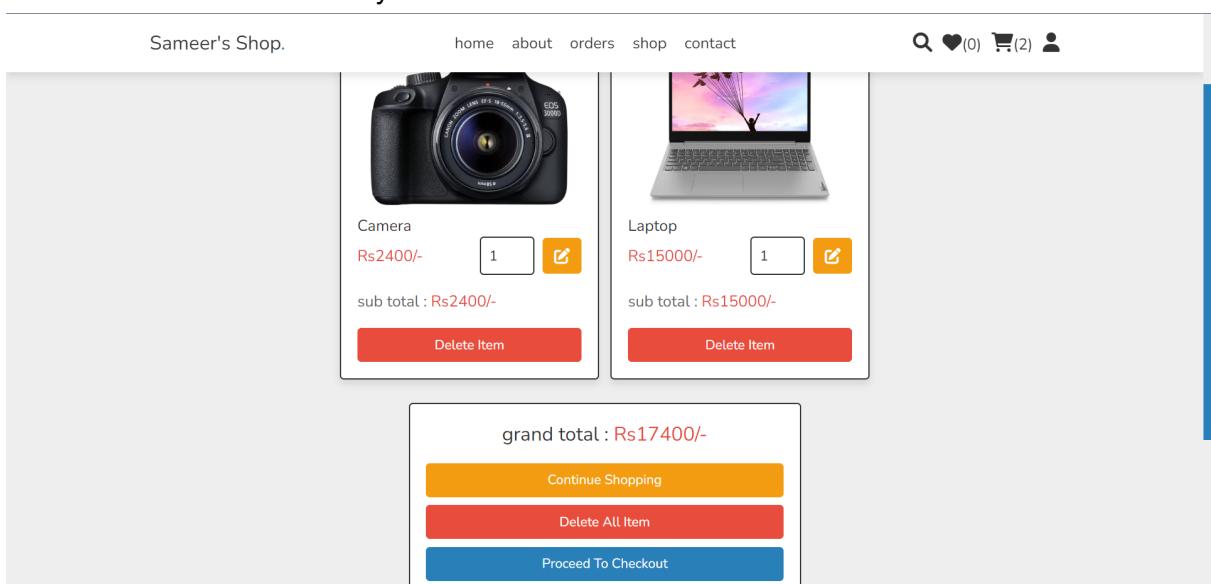

The image contains two screenshots of a web browser displaying a website for 'Sameer's Shop'.

Screenshot 1: The top part of the image shows the initial state of the website. The header reads 'Sameer's Shop.' and includes navigation links for 'home', 'about', 'orders', 'shop', and 'contact'. On the right side, there is a promotional banner for 'LATEST SMARTPHONES' featuring a smartphone with the text 'Never Settle' on its screen. Below the banner is a 'Shop Now' button. The background has an orange and yellow abstract pattern.

Screenshot 2: The bottom part of the image shows the website after a user has attempted to access a restricted area. A modal dialog box appears in the upper right corner with the message 'please login or register first!'. It contains two buttons: 'Register' and 'Login'. The rest of the page remains the same as in the first screenshot.

8. You can either register or login after registering, Then you can explore the website and add items to the card or your wish list.
