

1. Download xampp from: <https://www.apachefriends.org/download.html>
2. Install xampp and keep options the way shown in the Screenshots

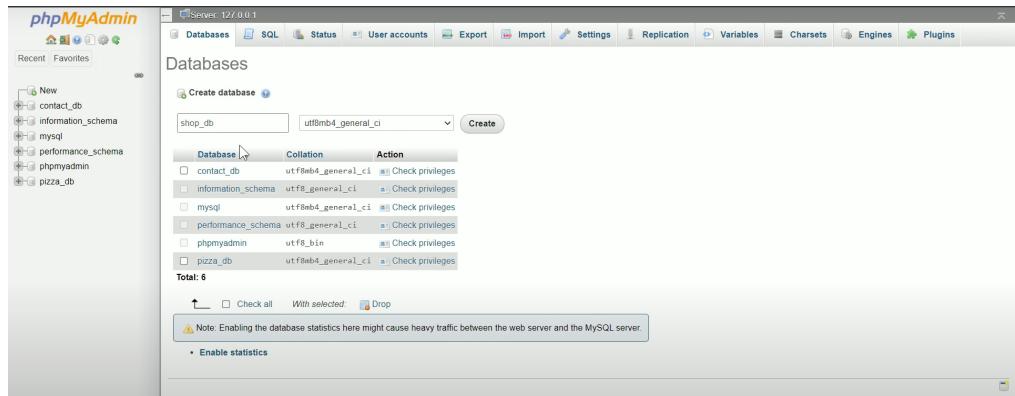

3. Open the xampp control panel and start the apache and MySQL from control panel

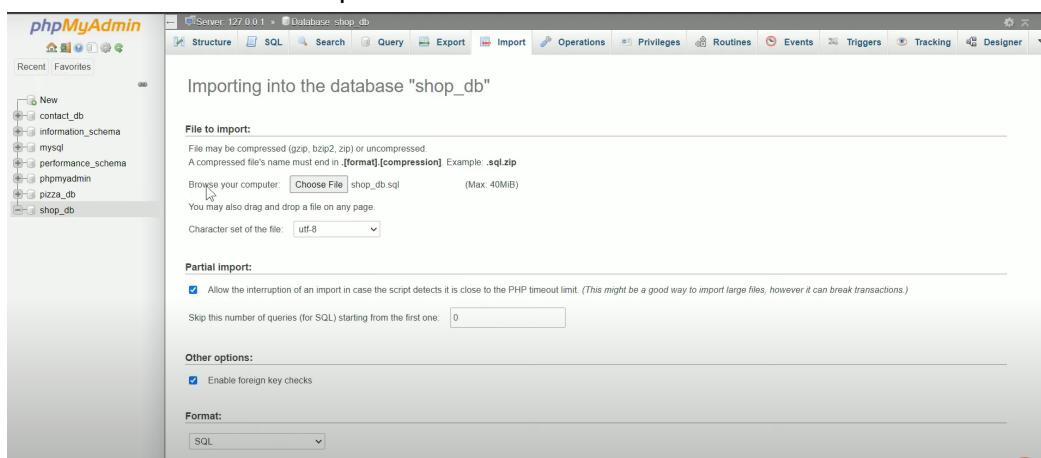

4. Then open the localhost/phpmyadmin/ on your browser click on new database and then name it 'shop_db' which is same as shop_db.sql provided in the github repo.

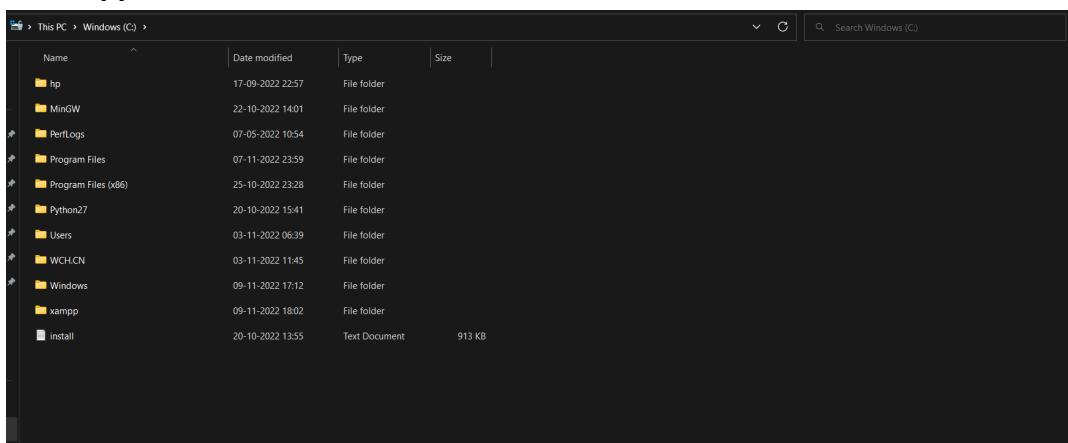

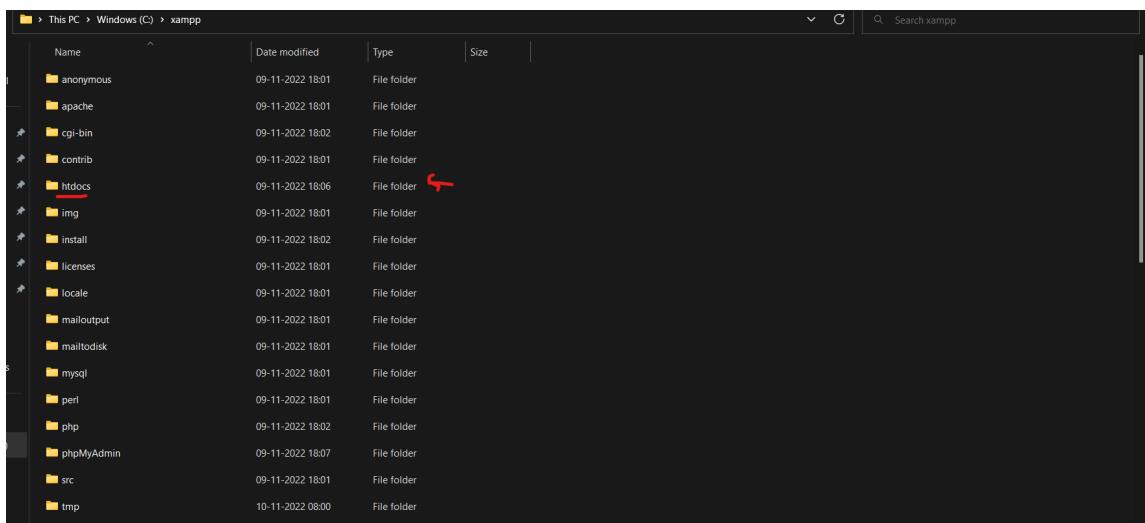

5. After creating the database import the shop_db.sql file provided using the ‘choose file option’ and then click on “Import” button or “Go button”

6. Now download the website the folder from the GitHub repo and paste it into the C:\xampp\htdocs

7. Go to the browser and type <http://localhost/ecommerce%20website> and it will take you to the home page of the website.
